

Army Navy Country Club

J.E. Richards Electric, Inc. performed a full electrical installation for the new Army Navy Country Club, including their maintenance building and cart barn.

The Club is a private, member-owned recreation facility. It draws its membership primarily from active duty and retired commissioned U.S. military officers and warrant officers.

The project consisted of over 300 normal and emergency dimming zones featuring ETC dimming systems, a 400kW generator, six food preparation and kitchen areas, a ball room, bridge room, two locker rooms, and multiple chandelier fixtures.

The drywall ceilings posed a challenge because they required extra support for each hanging fixture.
